To accomplish this noble task, a team of educationists, experts, working teachers and friends endeavor tirelessly to develop, text and improve contents, layout and design of the textbooks.

An attempt has made in this textbook to provide horizontal and vertical integration. The efforts of our experts and production personnel can bring about the desired results only if these textbooks are used effectively by teachers and students. Their suggestions will help us in further improving the qualitative contents of textbooks.

## NUMBERS

### 1.1 ROMAN NUMBERS

Read and write roman numbers up to 20 We have learnt numbers up to 1000 which are Hindi Arabic numbers. Roman numbers were used in ancient Rome. These are still in use in different ways.

Roman numbers are seen on the dials of watches and clock towers in big cities. Sometimes these numbers are also used in books and examination papers.
Roman numbers from 1 to 20 are based on the following symbols.

| Value | Symbol |
| :---: | :---: |
| 1 | I |
| 5 | V |
| 10 | X |

Read Roman numbers from 1 to 20.

| Arabic Numbers | Roman Numbers |  | Hindi Arabic Numbers | Roman Numbers |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Capital | Small |  | Capital | Small |
| 1 | I | i | 11 | XI | xi |
| 2 | II | ii | 12 | XII | xii |

| 8 | VIII | viii | 18 | XVIII | xviii |
| 9 | IX | ix | 19 | XIX | xix |
| 10 | X | X | 20 | XX | xx |

There is no Roman number to represent zero.

Rules for writing Roman Numbers
You can see that while we are writing 4 in Roman, we do not use IIII to represent 4.

Rule 1. The numerals I and $X$ can be repeated upto three times only.

For example: 3 = III , $20=\mathrm{XX}$
Rule 2. Writing a smaller numeral to the left of a Roman Numeral will make the number less than that much of its actual numerical value.

For example: 4 = IV , $9=1 \mathrm{X}$
Rule 3. Writing a smaller numeral to the right of a Roman numeral will make the number that much greater.

For example:

| $6=\mathrm{VI}$, | $7=\mathrm{VII}$ |
| :--- | :--- |
| $8=\mathrm{VIII}$, | $15=\mathrm{XV}$ |

Activity Complete:

| $8=5+1+1+1=$ |  |
| :--- | :--- |
| $13=$ |  |
| $14=$ |  |
| $16=$ |  |
| $19=$ | $\square \mathrm{VIII}$ |
|  | $\square$ |
| $4=\square$ |  |
| $6=\square$ |  |
| $8=\square$ |  |
| $12=\square$ |  |

## EXERCISE 1

## Unit 1

### 1.2 EVEN AND ODD NUMBERS

Identify even and odd numbers up to 99 within a given sequence

## EVEN NUMBERS <br> The numbers which are exactly divisible by 2 are even numbers. <br> Even numbers can produce pairs of objects with remainder zero.

## ODD NUMBERS

The numbers which are not exactly divisible by 2 are odd numbers.

Odd numbers can not produce pairs of objects with zero remainder.

| Numbers | Objects | Even / Odd |  |
| :---: | :--- | :---: | :---: |
| 1 |  | Odd |  |
| 2 |  | Even |  |
| 3 |  | Odd |  |
| 4 |  | Even |  |
| 5 |  | Odd |  |
| 6 |  |  | Even |
| 7 |  |  | Odd |
| 8 |  |  |  |
| 9 |  |  |  |
| 10 |  |  |  |

Teacher should help the students to identify even or odd numbers by using division by 2 and making pairs of the students and other
$2,4,6,8,10,12,14, \ldots$ are even numbers.
Even numbers have $0,2,4,6$ or 8 at ones place.
$1,3,5,7,9,11,13,15, \ldots$ are odd numbers.
Odd numbers have $1,3,5,7$ or 9 at ones place.

> I am odd: if the digit at ones place is: or

Write even or odd numbers within a given sequence Look at the following chart:

| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 |
| 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 |
| 30 | 31 | 32 | 33 | 34 | 35 | 36 | 37 | 38 | 39 |
| 40 | 41 | 42 | 43 | 44 | 45 | 46 | 47 | 48 | 49 |
| 50 | 51 | 52 | 53 | 54 | 55 | 56 | 57 | 58 | 59 |
| 60 | 61 | 62 | 63 | 64 | 65 | 66 | 67 | 68 | 69 |
| 70 | 71 | 72 | 73 | 74 | 75 | 76 | 77 | 78 | 79 |
| 80 | 81 | 82 | 83 | 84 | 85 | 86 | 87 | 88 | 89 |
| 90 | 91 | 92 | 93 | 94 | 95 | 96 | 97 | 98 | 99 |

The numbers given in red are odd numbers.
$1,3,5,7,9,11, \ldots, 99$.
The numbers given in green are even numbers.
$0,2,4,6,8,10,12, \ldots, 98$.

Example 1. Write even numbers between 3 and 11.
$3,4,5,6,7,8,9,10,11$
Thus, 4, 6, 8 and 10 are even numbers.
Example 2. Write odd numbers between 20 and 30.
20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30
Thus, 21, 23, 25, 27 and 29 are odd numbers.
Remember that

- Even number $+1=$ Odd number

O Odd number + 1 = Even number

- Even + Even = Even

O Odd + Odd = Even
O Even + Odd = Odd

## EXERCISE 2

### 1.5 COMPARING AND ORDERING THE NUMBERS

Compare two numbers using symbols <, > and =
Compare the number of the following objects:

How many candles are in blue box?

How many candles are in yellow box?

9 candles are more than 4 candles. We say 9 is greater than 4 Symbolically, we write as $9>4$. The symbol " $>$ " stands for "is greater than" Similarly, 4 candles are less than 9 candles. We say 4 is less than 9 Symbolically, we write as $4<9$. The symbol "<" stands for "is less than"

## Activity Use symbols < or >.

(i)
$5>3$
(ii)
$20 \square 16$
(iii)
$36 \square 47$
(iv) $\square$
(v)

(vi) $960 \square 980$

Compare the number of the following objects:

Both boxes have equal number of balls.We say 6 is equal to 6 Symbolically, we write as 6=6.

Now observe the following examples.

Example 1:
Compare 245 and 6472. Solution: 245 has 3 digits 6472 has 4 digits So, $245<6742$

## Example 2:

Compare 5423 and 967. Solution: 5423 has 4-digits 967 has 3-digits So, $5423>967$

Activity Compare 98 and 123.
Solution: 98 has $\square$ digits
123 has $\square$ digits
So, 98 $\square$ 123

Solution: | 504 has |  |  |
| :--- | :--- | :--- |
| 99 has | $\square$ digits |  |
| So, 504 | $\square$ | $\square 9$ |

## Unit 1

Example 3: Compare 2456 and 3467.
Solution: Both are 4-digit numbers
So we compare first extreme left different digits which are 2 and 3
Here $2<3$
So, $\quad 2456<3467$

## Activity <br> Compare 67835 and 67541

Solution: Both are $\square$ digit numbers
We compare first extreme left different digits
which are $\square$ and $\square$
Here $8 \square 5$
So, $67835 \square 67541$

## EXERCISE 5

(1) Fill in the blanks by using symbols <, > or =.
(i) $\mathbf{2 4 5}$
$\square 3167$
(ii) 54231 $\square$ 964
(iii) 3105 $\square$ 3105
(iv) 5421 $\square$ 5418
(v) 672315 $\square$ 871237 (vi) 120001 $\square$ 105552
(2) Compare the numbers by using symbols <, > or =.

| (i) 542 | and 6712 | (ii) 94562 | and 4392 |
| :--- | :--- | :--- | :--- | :--- |
| (iii) 6324 | and 6324 | (iv) 6421 | and 6578 |
| (v) 94561 and 94271 | (vi) 345671 | and 345921 |  |

## Unit 1

### 1.6 NUMBER LINE

Represent and identify the value of given number on number line

## A number can be represented by taking equal distance on a line

The line on which numbers are represented is called Number Line.

A number line

Example : Represent a 4 on the number line.

Step 1: Draw a line with scale.

Step 2: Mark points at equal distances.

Step 3: Select a point from left to right.

Step 4: Represent numbers in ascending order from starting point.

Step 5: Identify the given number 4.

## Activity Which number has been ticked $(\checkmark)$ at the

 number line.

Activity Which number has been crossed $(x)$ at the number line.

## EXERCISE 7

1. Represent 6 on a number line.

2. Represent the following numbers on given number line. $6,7,9,10$ and 12.

3. Fill in the blanks with before and after numbers on the given number line.

4. Encircle the following numbers on the given number line. 14, 16 and 18.

### 2.1 ADDITION

We have already learnt how to add numbers up to 3-digit in previous class.

## EXERCISE 8

Solve.

$1184+101=\square$
$12850+88=\square$
$13104+645=$
$14542+227=\square$
$15300+200=$

Add numbers up to 4-digits (with and without carrying) vertically and horizontally
First we add 4-digit numbers without carrying.
Example 1: Add 5462 and 1234
Solution: (i) Vertical method:

(ii) Horzontal method:

Or $5462+1234=\square$

| Th H | T | O |  |

| :--- | :--- | :--- | :--- |
| 1 | 2 | 3 | 4 |$=$| 6 | 6 | 9 | 6 |
| :--- | :--- | :--- | :--- |

Step 1: Add the ones
$2+4=6$
Step 2: Add the tens
$6+3=9$
Step 3: Add the hundreds $\mathbf{4 + 2 = 6}$
Step 4: Add the thousands $5+1=6$
Note: Start from ones. Add ones first, then tens, then hundreds and add thousands in last.

Aslam sells 3245 note books of
Mathematics and 2568 note books of Sindhi in a month. Find the total number of note books he sold in that month.

## Solution:

Number of Mathematics note books sold $=3{ }^{(1)} 2^{(1)} 45$
Number of Sindhi note books sold = + 2568
(1) Rehana bought two books. One book has 328 pages and other 1034 pages. How many pages in both?

## Subtract numbers up to four digits with and without borrowing

First we subtract 4-digit numbers without borrowing.

## Example: Solve 6554-2313

Solution:

or 6554 - 2313
Solution: $6554-2313=4241$
Note: Start from ones column first, then tens, hundred and last of all thousands.

Teacher should help students to explain the steps of subtraction of numbers up to 4-digits.

## EXERCISE 14

(A) Solve:

WWW.perfect24u.com

Now we subtract 4-digit numbers with borrowing.

## Example: Subtract 1446 from 3324

Th H T O

Step 1: 4 cannot be subtracted from 6.
So, we will take 1 tens from 2 tens.
As 1 ten $=10$ ones. $10+4=14$ ones
Then subtract 6 from 14 and write 8 at ones place.
Step 2: After taking 1 ten from 2 tens, 1 ten is left.
Since 4 cannot be taken away from 1 tens.
So, we will take 1 hundred from 3 hundreds. 1 hundred = 10 tens. 10 tens +1 ten = 11 tens.
Then subtract 4 from 11 and write 7 at tens place.
Step 3: After taking 1 hundred from 3 hundred, 2 hundred left.
Since 4 cannot be taken away from 3 hundred.
So, we will take 1 thousand from 3 thousands.
1 thousand $=10$ hundred and
10 hundreds +2 hundred $=12$ hundreds.
Thus, $12-4=8$
Now we write 8 at hundred place.
Step 4: At last after taken 1 thousand from 3 thousands, left 2 thousands. Now subtract 1 from 2 and write 1 in thousands column.
or horizontally we write it as
$3324-1446=1878$

(1) A shopkeeper has 850 chocolates of milk. He sold 480 chocolates. How many chocolates are left?
(2) Ali has two notes in his wallet. Their value together is Rs 600. One note is of Rs 100. What is the value of other note?

(5) A bakery had 4500 packet of cookies. 1862 were sold. How many were left?
(6) The population of a village comprises 9015 adult persons. 4386 are men, find the number of women.

### 2.3 MULTIPLICATION

Use the term 'product' for multiplication of two numbers We have learnt multiplication in previous class.

There are 3 Starfish.
Each Starfish has 5 arms.
How many arms are altogether?
$5+5+5=15$
It means
3 times $5 \Longrightarrow 3$ by 5
Or $3 \times 5=15$
The product of 3 and 5 is 15 .

We can use the term "product" for "multiplication" of numbers.

Examples: Find the product of:
(1) 4 and 6 .

Solution:
6 by 4 means 6 times 4
$4 \times 6=24$
The product of 4 and 6 is 24 .
(2) 8 and 5 .

Solution:
Product of 8 and 5 means 8 by 5 or 8 times 5
$8 \times 5=40$
or
8
$\begin{array}{r}\times 5 \\ \hline 40 \\ \hline\end{array}$
Thus, the product is 40 .

Teacher should revise the multiplication concept through process of repeating addition and use.

## EXERCISE 22

(1) In a parking area there is capacity of 15 motor bikes in a row. How many motor bikes are there in such 6 rows?
(2) There are 7 days in a week. How many days are there in 40 weeks?
(3) There are 8 trees in the park. 6 birds are sitting on each tree. How many birds are there in all?
(4) A packet contains 54 chocolates. How many chocolates are there in 7 such packets?
(5) There are 3 scoops of ice cream in a cup. How many scoops of ice cream used to make 48 cups of ice creams?
(6) There is space of 25 books in one shelf. How many books can be kept such 6 shelves?

### 2.4 DIVISION

Divide 2-digit numbers by 1-digit numbers (with zero remainder).

Example 1: There are 16 cones in a box of ice cream with 4 in each set. How many 4's are there in $16 ?$

$$
\begin{aligned}
& 16-4=12 \\
& 12-4=8 \\
& 8-4=4 \\
& 4-4=0
\end{aligned}
$$

Or we can solve it by using division

4 is contained 4 times in 16.

So, $16 \div 4=4$

## Process of division

Divisor

Teacher should explain the long division method of division with zero remainder.

Activity the word:

Encircle the number which matches
(4) $\begin{array}{r}5 \\ 20\end{array}$
$6 \longdiv { 4 2 }$
$7 \begin{gathered}8 \\ 7 \longdiv { 5 6 }\end{gathered}$
quotient

## Example 2: Solve $55 \div 5$

Step 1: First divide the number given in tens place by 5
$5 \div 5=1$. Write 1 as quotient
in the tens place.
Subtract 5 from 5 we get 0 .

## FRACTIONS

### 3.1 COMMON FRACTIONS

Express the fractions in figures and vice versa
We have learnt about fractions.
A fraction is equal parts of a whole.
Some examples of fractions are $\frac{1}{2}, \frac{2}{3}, \frac{3}{4}$, etc.
We get fractions by dividing different objects in equal parts.
Suppose a circular piece of paper is cut into four equal parts. One out of 4 parts is given to a child. This piece is one-fourth of the circular piece of paper and is written as $\frac{1}{4}$. It is read as " 1 by 4 ."

The remaining three pieces out of 4 are written as $\frac{3}{4}$. It is read as 3 by 4 or three-fourth.
These numbers $\frac{1}{4}, \frac{3}{4}$ and $\frac{2}{3}$ are called Common fractions. In common fraction $\frac{3}{4}, 3$ is called the numerator and 4 is the denominator.

## Upper number of the fraction 3 Lower number of fraction is called Numerator is called Denominator

## Examples 1:

1. In $\frac{2}{9}$ Numerator is 2 and Denominator is 9 .
2. $\ln \frac{5}{12}$ Numerator is 5 and Denominator is 12 .

Teacher should bring different real objects like biscuits and apples etc in class and cut them in equal parts to show fractions.

## Unit 3 FRACTIONS

Express the fractions of coloured part in the following figures:

Show the fractions by colouring the following figures:
(i)

(ii)

(iii)

$\frac{2}{5}$
$\frac{1}{3}$
$\frac{3}{8}$

## Unit 3 FRACTIONS

## EXERCISE 26

(A) Express the fractions of coloured parts of the given figures numerically.
(1)

(2)

(3)

(4)

(5)

(6)
(B) Colour the following figures to express given fractions:
(1)

(2)

(3)

(4)

$\frac{6}{7}$
(C) Write the fractions expressed by:
(1) Numerator $=4$, Denominator $=11$, fraction $=\square$
(2) Numerator $=7$, Denominator $=8$, fraction $=\square$

### 3.2 EQUIVALENT FRACTIONS

Identify equivalent fractions from the given figures.
Example: Observe the coloured part in the following three figures.

The coloured part in each figure represents the following fractions:

$$
\begin{array}{lll}
\frac{1}{2} & \frac{2}{4} & \frac{3}{6}
\end{array}
$$

It is also observed that:

8
The coloured part shown in all the three circles are of same size
$\int$ So, $\frac{1}{2}$ represents same part (half circle) as $\frac{2}{4}$ and $\frac{3}{6}$.
8 Mathematically we write it as: $\frac{1}{2}=\frac{2}{4}=\frac{3}{6}$
8 So, $\frac{1}{2}, \frac{2}{4}, \frac{3}{6}$ are equivalent fractions.
Write three equivalent fractions for a given fraction
Example 1: Write three equivalent fractions for a given fraction $\frac{1}{3}$ Solution:

$\frac{1}{3}$

$\frac{2}{6}$

$\frac{3}{9}$

$\frac{4}{12}$

Here $\frac{1}{3}, \frac{2}{6}, \frac{3}{9}$ and $\frac{4}{12}$ represent same size of shape,
therefore $\frac{1}{3}=\frac{2}{6}=\frac{3}{9}=\frac{4}{12}$
Thus $\frac{2}{6}, \frac{3}{9}$ and $\frac{4}{12}$ are three equivalent fractions of the given fraction $\frac{1}{3}$.

Look at the following:
$\frac{1}{3}=\frac{1 \times 2}{3 \times 2}=\frac{2}{6}, \frac{1 \times 3}{3 \times 3}=\frac{3}{9}, \frac{1 \times 4}{3 \times 4}=\frac{4}{12}$
This explanation shows that:
If we multiply the numerator and denominator of a fraction by the same number (other than zero), we get an equivalent fraction.

## Example 2:

Find three equivalent fractions for $\frac{1}{2}$ and $\frac{2}{5}$.
Solution
$\frac{1}{2}=\frac{2}{4}=\frac{3}{6}=\frac{4}{8}$
$\frac{1 \times 2}{2 \times 2}=\frac{2}{4}, \frac{1 \times 3}{2 \times 3}=\frac{3}{6}, \frac{1 \times 4}{2 \times 4}=\frac{4}{8}$

Explanation
$\frac{2}{5}=\frac{4}{10}=\frac{6}{15}=\frac{8}{20} \quad \frac{2 \times 2}{5 \times 2}=\frac{4}{10}, \frac{2 \times 3}{5 \times 3}=\frac{6}{15}, \frac{2 \times 4}{5 \times 4}=\frac{8}{20}$

## EXERCISE 27

1. Identify and write the figures which show equivalent fractions.
(i)

(ii)

(iii)

2. Write three equivalent fractions for the following:
(i) $\frac{1}{4},-, \quad$,
(ii) $\frac{2}{3}, \ldots,-$
(iii)

(iv) $\frac{4}{5}$,
(v) $\frac{1}{5}$,

(vi) $\frac{2}{6}$,

### 3.3 PROPER AND IMPROPER FRACTIONS

Differentiate between proper and improper fractions
Proper Fraction:
A fraction in which numerator is smaller than the denominator is called proper fraction.

Improper Fraction:
A fraction in which numerator is greater than or equal to the denominator is called improper fraction.

For example $\frac{1}{4}, \frac{2}{5}, \frac{3}{7}, \frac{5}{6}$ and $\frac{11}{12}$ are proper fractions.

For example $\frac{4}{1}, \frac{5}{5}, \frac{6}{5}, \frac{5}{4}$ and $\frac{12}{11}$ are improper fractions.
$\frac{3}{1}, \frac{2}{1}, \frac{2}{2}, \frac{3}{3}, \frac{4}{4}$ are also some examples of improper fractions.
(2) Activity Write proper and improper fractions in the following boxes.
$\frac{2}{9}, \frac{4}{3}, \frac{11}{7}, \frac{6}{1}, \frac{2}{5}, \frac{9}{9}, \frac{8}{1}, \frac{1}{3}, \frac{14}{13}, \frac{12}{15}$

| Proper Fractions | Improper Fractions |
| :---: | :---: |
|  |  |

### 3.4 COMPARING FRACTIONS

## Compare fractions with same denominators, using

 symbols '<', '>' and ' $=$ 'Let us consider the coloured parts of the following figures:

Here each figure is divided into 3 equal parts.
Fraction $\frac{1}{3}$ has 1 coloured part.
Fraction $\frac{\mathbf{2}}{3}$ has $\mathbf{2}$ coloured parts.
As 1 is less than 2
or in symbols $\mathbf{1} \mathbf{2}$
So, $\frac{1}{3}<\frac{2}{3}$
Similarly, we can say $\frac{2}{3}>\frac{1}{3}$ because $2>1$ and both fractions have same denominator.
Here, each figure is divided into
4 equal parts.
Both fractions have 3 coloured
parts out of 4.
As 3 is equal to 3
Or $3=3$
So, $\frac{3}{4}=\frac{3}{4}$

If denominators of two fractions are same, the fraction with the larger numerator is the larger fraction.

## Unit 3 FRACTIONS

We use symbols to compare fractions.

(7) $\frac{3}{9} \square \frac{4}{9}$
(8) $\frac{5}{6} \square \frac{2}{6}$
(9) $\frac{7}{11}$

## Unit 3 FRACTIONS

### 3.5 ADDITION OF FRACTIONS

Add two fractions with same denominators
When we add the fractions with same denominators, we will add their numerators only.

## Hence

Example: Add $\frac{3}{8}+\frac{4}{8}$
Solution: $\frac{3}{8}+\frac{4}{8}=\frac{3+4}{8}=\frac{7}{8}$
Activity Solve:
(1) $\frac{1}{7}+\frac{4}{7}=\frac{1+4}{7}=\square$

$$
\begin{equation*}
\frac{4}{9}+\frac{3}{9}=\frac{4+3}{9}=\square \tag{2}
\end{equation*}
$$

$$
\begin{equation*}

## MEASUREMENT

### 4.1 LENGTH

We have learnt about length and the unit of length i.e metre and centimetre.
Read standard units of length (kilometre, metre and centimetre) including abbreviations.
The units of length are used to measure height, width, depth, length and distance. In the international system, of standard unit, the metre is the basic unit of length. It is denoted by m . We use centimetres for measuring small lengths, metres for bigger and kilometres for long distance. The abbreviation used for kilometre is " km ", for metre is " $m$ " and for centimetre is " cm ".

## Activity Colour the correct unit of length.

## Unit 4

Measure and write standard units of length including abbreviations

The length of your new strip is one metre ( m ).

## 100 centimetres $=1$ metre

Now use your metre strip to measure the length and height of your desk and height of a door.

Suppose you made 1000 meter strips and taped them together.
The length of your new strip would be one kilometer (km).

### 4.3 VOLUME/CAPACITY

We have learnt about capacity that capacity is the amount of liquid a container hold. We know that the standard unit of capacity is litre which is denoted by "l"

## Units of volume

## Read standard units of volume (litre and millilitre) including abbreviations

The standard units of capacity are litre ( $\ell$ ) and millilitre ( $\mathrm{m} \ell$ ). Large quantity of liquid like water in water cooler or oil in a big bottle is measured in litres ( $\ell$ ). Small quantity of liquids like glass of water or cup of tea, ink in pen is measured in millilitre (ml). There are 1000 millilitres in one litre.

$$
\begin{aligned}
& 1000 \text { millilitres }=1 \text { litre } \\
& 1000 \mathrm{ml} \quad=1 \mathrm{l}
\end{aligned}
$$

Activity Colour the suitable unit of capacity for the given things of liquid.

## Unit 4

(4) $36 \ell$ and $23 \ell 825 \mathrm{ml}$

## Unit 4 MEASUREMENT

Solve real life problems involving same units of volum for addition with and without carrying

## Read and Write days and dates from the calendar

We have already learnt about the number of months and their names in calendar.

In solar calendar, there are 365 days in a year. A year which is exactly divisible by 4 is called a leap year. For example 2000, 2004, 2008, 2012, 2016, 2020 are some leap years. A leap year has 366 days. The month of February in a leap year is of 29 days. Let us now learn to read and tell the day and date of a particular month.

### 6.1 GEOMETRICAL SHAPES

Recognize point, line segment and ray
Point
It used for representing of position of any place. Capital letters A,B,C, . . . X, Y, Z are used to show the points. We can draw many points on a plain paper.
We can read them:
Point A, Point B, Point C, . . . Point Z.

| $\mathbf{A}$ |  | $\mathbf{B}$ |  |
| :---: | :---: | :---: | :---: |
|  | C |  |  |
|  |  |  |  |
|  | $\dot{\text { D }}$ |  | $\dot{E}$ |
|  |  |  |  |
|  | $\dot{F}$ |  |  |

## Line Segment

A line segment is a straight path between two points. Here point $A$ and point $B$ are called end points.

We can call it either line segment $A B$ or line segment $B A$. symbolically, we can write it as:

## $\overline{A B}$ or $\overline{B A}$

## $\overline{A B}$ is read as line segment $A B$ and $B A$ is read as line segment $B A$.

Ray
Take a line segment $\overline{\mathrm{AB}}$.

$$
\vec{A} \quad B
$$

Now extend one end point of it, say point B in forward direction.
Draw an arrow mark. We get the figure
 drawings.

It is called ray $A B$. In symbol, it is written as $\overrightarrow{A B}$.
A ray has one end point. In $\overrightarrow{A B}$ has $A$ is end point. Similarly we can draw $\overrightarrow{B A}, B$ is end point.

A ray is formed by drawing an arrow mark on one end point of a line segment. $\overrightarrow{\mathbf{P}} \quad$ Ray PQ $\quad \mathbf{Q}$ A ray has only one end point. The length of ray cannot be measured.

Activity Tick $(\checkmark)$ the line segments and cross $(x)$ the rays. Also encircle $(O)$ the points in each.

## Unit 6 GEOMETRY

Classify figures according to number of sides as quadrilaterals (rectangles, squares) and triangles

## Quadrilateral

A quadrilateral is a closed figure. It has four sides and four vertices.
$A B C D$ is a quadrilateral. Its sides are $\overline{A B}, \overline{B C}, \overline{C D}$ and $\overline{D A}$.

Points $A, B, C$ and $D$ are vertices.
Squares and rectangles are quadrilateral.

## Square

A quadrilateral whose four sides are equal in measure is called a square. ABCD is square.
$\overline{\mathrm{AB}}=\overline{\mathrm{BC}}=\overline{\mathrm{CD}}=\overline{\mathrm{DA}}$
$A$ square has four vertices $A B C$ and $D$.

## Rectangle

A quadrilateral whose opposite sides are equal is called a Rectangle. PQRS is a rectangle in which $m \overline{P Q}=m \overline{R S}$ and $m \overline{P S}=m \overline{Q R}$
A rectangle has four vertices $P, Q, R$ and $S$.

## Triangles

A triangle PQR is a closed figure having three sides $\overline{P Q}, \overline{Q R}$ and $\overline{R P}$.

The points $P, Q$ and $R$ are called the vertices of the triangle $P Q R$.

Activity Name the following quadrilaterals by joining dots. also name these shapes.

(2) Draw two rectangles, two squares and two triangles by joining the given dots.

(3) Complete the following sentences by Square, Rectangle, Triangle.
(i) A plain figure bounded by 4 straight lines is called $\qquad$ .
(i) A closed figure bounded by 3 sides is $\qquad$ .
(iii) Opposite sides of a $\qquad$ are equal in measure.
(iv) All sides of a $\qquad$ are equal in measure.
(v) A quadrilateral whose opposite sides are equal is .

Identify circle, its radius and diameter
Look at the picture of a coin of Rs 5 It has a circular shape.
There is no side and no vertex in a Circle.

## Activity

## Diametre

Take a circular piece of paper, fold it. So, that it is divided into two equal parts.

Draw a line in crease. This represents a line segment and such line segment is called diameter of the circle. Name the end points

$A$ and $B$ and write as $\overline{\mathrm{AB}}$. $\overline{\mathrm{AB}}$ is diametre of the circle.

## Radius

Now fold the circular strip two times. So, that it is divided in four equal parts.

Now unfold and observe the crease. Join line and point of the creases. Name them as $\overline{\mathrm{AB}}$ and $\overline{\mathrm{CD}}$.

Two line segments $\overline{\mathrm{AB}}$ and $\overline{\mathrm{CD}}$ meet each other at one point ( O ). This point is called centre of the circle. The distance from this point O to boundary of the circle is called radius.
$O$ is the centre of the circle and $\overline{O A}$ is its radius. $\overline{\mathrm{AB}}$ and $\overline{\mathrm{CD}}$ are diameters of the circle.

Diameter of a circle is twice of its radius.

Calculate perimeters of squares, rectangles and triangles. Perimeter
It is a triangle. It has three line segments. Line segment $A B$ is 5 cm long; line segment $B C$ is 4 cm long and line segment $C A$ is 3 cm long. The sum of these lengths is $5 \mathrm{~cm}+4 \mathrm{~cm}+3 \mathrm{~cm}=12 \mathrm{~cm}$. This sum is called perimeter.

The total length of all sides of any figure is called its perimeter.

|  | $\begin{aligned} & 17 \\ & \hline \end{aligned}$ |  | $y>x$ |  |  |
| Lion | Deer | Monkey | Fox | Rabbit | Elephant |

Look at the picture graph and answer the following:
(1) How many lions are there?
(2) How many animals are there altogether?
(3) How many more foxes are there than elephants? $\square$
(4) Haw many different types of animals are there? $\square$
(5) Which animals are most in number?
(6) Which animals are least in number?
(C) Following is picture graph of the traffic passing through a signal.
